

Saeed Abdelgalil Sherief

Cybersecurity | Penetration Testing

[01145691850](https://www.linkedin.com/in/saeedabdelgalilsherief/) | ssherief980@gmail.com | Cairo, Egypt | [linkedin](https://www.linkedin.com/in/saeedabdelgalilsherief/)

Summary

Penetration Tester in training with hands-on experience across enterprise network design, security hardening, and ethical hacking fundamentals. Actively building practical skills through a dedicated Networking & Infrastructure diploma, a Vulnerability and Penetration Testing program, and 12+ applied network security labs. Comfortable with Kali Linux tooling, scripting in Python/Bash, and enterprise routing & switching. Looking to apply a strong hands-on foundation to real-world penetration testing work.

Education

Menoufia University

Bachelor of Engineering in Electronics and Communications

Sep 2023 – Jul 2028

Menoufia , Egypt

- Relevant Coursework : Computer Networks, Data Communications, Network Security, Operating Systems, Programming, Algorithms & Data Structures

COURSES & TRAINING

Diploma in Networking & Infrastructure

Instant Solution — CCNA, CCNP, MCSA, BGP, MPLS, Firewalls, VMware, Cloud

Present

Online

- Completed 12+ enterprise network labs covering hierarchical switching, hardened device security (Port Security, BPDU Guard, Portfast, DTP/VTP control), and Layer 2 redundancy (LACP/PagP EtherChannel, PVST+ STP).
- Designed and subnetted multiple addressing schemes (VLSM/FLSM) for VLAN segmentation, and configured DHCP services, Inter-VLAN routing (ROAS & multilayer SVI), Syslog, and NTP across simulated enterprise topologies.
- Configured and troubleshoot multi-protocol routing (RIP, multi-area OSPF with virtual links, EIGRP) including authentication, route redistribution, prefix-list/route-map filtering, and route tagging to prevent redistribution loops.
- Implemented HSRP for gateway redundancy and deployed enterprise wireless connectivity using a Wireless LAN Controller (WLC) and Lightweight Access Points (LAP).

Vulnerability and Penetration Testing

DEPI – Digital Egypt Pioneers Initiative

Present

Hybrid: Online & In-person

- Currently covering penetration testing fundamentals, progressing into Web, Network, and Mobile Application Penetration Testing.

Cybersecurity Basics

IEEE Al-Azhar University — Hands-on with Kali Linux, SET | Workshops & simulations

Oct 2024 – Sep 2025

Naser City

- Covered ethical hacking fundamentals with an introduction to Web Penetration Testing.

Cybersecurity Fundamentals

GDG On Campus – CIC — Web Pentesting, Wireshark, Metasploit, Nmap, CTF-style tasks

Dec 2024 – Sep 2025

Online

- Covered core cybersecurity fundamentals with hands-on introduction to Web Penetration Testing.

Cloud Computing

Huawei HCIA — Intro to cloud services and fundamentals

Sep 2024

Online

SKILLS

- **Penetration Testing:** Kali Linux, SET, Wireshark, Nmap, Burp Suite, Kismet
- **Information Gathering:** Reconnaissance, Social Engineering Fundamentals
- **Networking & Routing/Switching:** TCP/IP, OSI Model, Subnetting (VLSM/FLSM), VLANs, Inter-VLAN Routing, EtherChannel (LACP/PAgP), STP/PVST+, HSRP, RIP, OSPF, EIGRP, Route Redistribution & Filtering, ACLs, Wi-Fi Security, WLC/LAP Wireless
- **Security Hardening:** Port Security, BPDU Guard, PortFast, DHCP Snooping, VTP/DTP Control, ACLs, Route Filtering (Prefix Lists, Route Maps)
- **Programming:** Python, Bash, Basic Algorithms & Data Structures
- **Concepts:** Algorithms, Data Structures, Statistics, Probability, Linear Algebra

Projects

Campus Network Integration

Cisco Packet Tracer

- Designed and implemented an enterprise-simulated campus network with 1 core router and 4 access switches, segmenting traffic into 5 VLANs using VLSM/FLSM IP addressing.
- Configured Inter-VLAN routing (Router-on-a-Stick), DHCP/DNS services, VTP, and LACP EtherChannel for link redundancy, plus PVST+ to prevent switching loops.
- Hardened Layer 2 security via port security, DHCP snooping, and disabled unused ports/DTP; verified connectivity, STP root bridge roles, and EtherChannel status through CLI show commands and packet captures. .
